EDUCATION

Bachelor of Technology in Computer Science and Engineering *2024*
College of Engineering Trikaripur, APJ Abdul Kalam Technological University **CGPA: 7.53/10**

Higher Secondary Education *2020*
Tagore Vidyaniketan Government Vocational Higher Secondary School **Percentage: 87.5%**

TECHNICAL SKILLS

Programming: Python, SQL
Python Libraries: Pandas, NumPy, Matplotlib, Seaborn
Data Analysis: Data Cleaning, Data Visualization, Business Analysis
Databases: PostgreSQL, MySQL
Business Intelligence: Power BI, Power Query, DAX, Microsoft Excel
Tools: Git, GitHub, VS Code, pgAdmin

INTERNSHIP EXPERIENCE

Data Analytics *09/2026 – 10/2026*
InternNova *6 Weeks*

- Developed an understanding of data analytics concepts, data types, dataset structures, and the role of data analysis in supporting business decision-making.
- Practiced working with datasets, inspecting data structures, identifying data quality issues, and preparing data for further analysis.
- Applied data processing and analytical techniques to organize datasets, examine variables, and prepare data for extracting meaningful insights.
- Performed statistical analysis, correlation, probability, and outlier detection; used Matplotlib and Seaborn for visualization and conducted EDA to identify patterns, clean data, and derive business insights.
- Imported, cleaned, and transformed data using Power BI and Power Query; established data relationships, developed DAX measures, and created charts, tables, and KPI cards to analyze business performance.

PROJECTS

Superstore Sales Analysis
PostgreSQL | SQL | Excel | Power BI

- Analyzed a Superstore e-commerce dataset to evaluate sales, profit, orders, and overall business performance.
- Performed data quality checks, including NULL-value analysis, duplicate detection, date-range validation, and numerical-range validation.
- Used SQL queries and aggregations to calculate key KPIs and analyze regional performance, shipping modes, categories, sub-categories, and individual products.
- Developed an interactive Power BI dashboard to visualize business KPIs and analytical findings, reporting $2.30M total sales, $286K total profit, 5,009 orders, and a 12.47% profit margin.

Copy-Move Image Forgery Detection Using CNN
Python | CNN | Django | MySQL

- Developed an academic project for copy-move image forgery detection using a Convolutional Neural Network (CNN).
- Performed image preprocessing and grayscale conversion to prepare images for CNN-based classification.
- Developed a web application using Python and Django and integrated MySQL for application-related data management.

CERTIFICATIONS

- Data Analytics – InternNova
